1.1 Background and Necessity for the Website

Fandom is a group or community of fans sharing a common passion. Fandom centered around anime, gaming, movies, TV shows, Korean-Pop (K-Pop), comics, and manga have become some of the most active and passionate online communities.

Fans are constantly looking for the latest news, character information, trailers, merchandise, events, and community discussions related to their favorite interests.

However, today, this information is scattered across multiple portals such as fan wikis, streaming services, social media, ticketing Websites, online stores, and news portals.

As a result, fans often must switch between several Websites just to stay updated on a single fandom, making the experience time-consuming and inconvenient.

Discovering new fandoms or exploring related interests can also be challenging because there is no single portal that brings everything together.

To address this issue, there is a requirement for a centralized and visually engaging Website that combines content from multiple fandom categories in one place.

Such a portal would allow users to easily browse articles, explore characters, view trailers and media, discover upcoming events, and access merchandise through a well-organized and user-friendly interface.

By bringing together diverse fandom content into a single hub, the Website would enhance content discovery, improve accessibility, and provide a more enjoyable experience for fans of all interests.

© Aptech Limited

1.2 Proposed Solution

The proposed solution is to develop a Website called '**FandomVerse'** that serves as an engaging and visually rich information hub for fandom enthusiasts.

The Website would enable visitors to browse and explore curated content across multiple categories, including Anime, Gaming, Movies, TV Shows, K-Pop, Comics, and Manga.

The Website should support search, sorting, and filtering of content across categories, allowing users to easily discover more about their favorite fandoms.

It would showcase image galleries, videos, audio clips, featured articles, character profiles, event highlights, trailers, merchandise collections, fan shopping recommendations, and information on upcoming releases.

Dedicated merchandise and shopping sections should help visitors explore officially licensed collectibles, apparel, accessories, plushies, figures, and other fan products related to their favorite franchises.

They can add these merchandise items to their shopping cart, although actual shopping functionality would not be part of the Website.

The Website would be developed using technologies such as HTML5, CSS3, JavaScript, Bootstrap/ReactJS/Angular, jQuery, and JSON/Text files for storing and presenting pre-populated content. Since the project is designed as a responsive Website, no backend technologies or server-side databases would be used.

An AI-powered chatbot should also be available to answer frequently asked questions and help visitors navigate the Website.

The AI chatbot would operate using a responsive, rule-based, or pre-scripted question-and-response dataset rather than a live external AI service, ensuring consistency with the Website's lightweight, no-backend architecture.

The portal would be designed and developed as a **Single Page Application (SPA)**, easy to deploy, maintain, and access while providing a fast, visually appealing, and user-friendly experience that adapts seamlessly across desktop, tablet, and mobile devices.

© Aptech Limited

1.3 Purpose of the Document

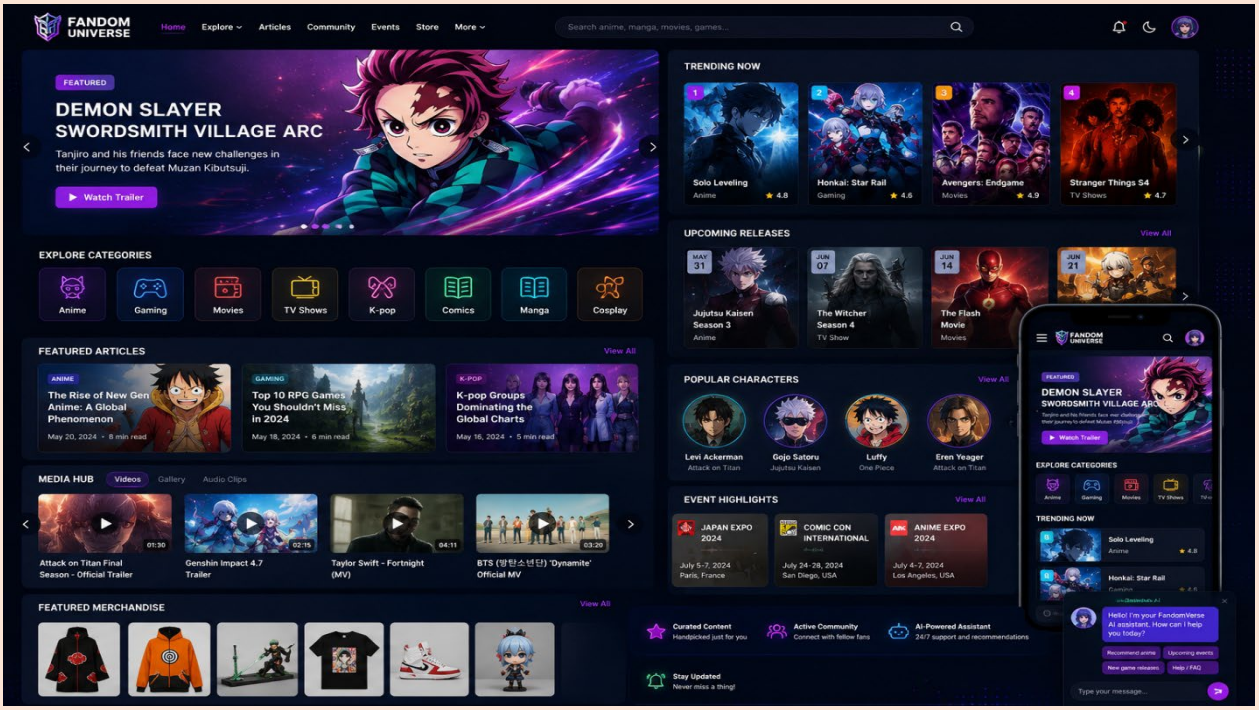

The purpose of this document is to outline the functional, non-functional, and technical requirements for the development of the **'FandomVerse'** Website. This SRS defines the goals, scope, features, constraints, and user expectations for the portal.

This document describes the objectives and features of the Website, its user interfaces, the functions it is expected to perform, and the constraints under which it must operate.

It is intended to serve as a reference for both stakeholders and developers involved in designing, building, and maintaining the Website.

1.3.1 Who Can Use this Document?

Stakeholders and Developers of this portal.

Sample Site Map

Landing Page

- **Category hubs:** Anime, Gaming, Movies, TV Shows, K-Pop, Comics, and Manga.
- **Cross-category features:** Search, Featured Articles, Trailers, Events, Merchandise, Upcoming Releases, and Chatbot.
- Upon selecting a category, the respective category hub page should be displayed, showing content specific to that fandom category.
- Cross-category features such as Search, Bookmarks, Contact Us, About Us, and the chatbot remain accessible from every page regardless of the category currently being viewed.

© Aptech Limited

1.4 Scope of Project

The 'FandomVerse' project is a browser-based Website designed to help fandom enthusiasts discover and explore content from multiple fan communities through a single, unified platform.

It would include category hubs for Anime, Gaming, Movies, TV Shows, K-Pop, Comics, and Manga, with relevant articles, media, and character profiles.

The Website would provide features such as global search with sorting and filtering, image galleries, embedded videos and audio clips, event highlights, trailers, a merchandise showcase, and an upcoming releases calendar.

Visitors would be able to browse merchandise, select items, and add them to a shopping cart for a convenient shopping experience.

An AI-powered chatbot should also be available to answer frequently asked questions and help visitors navigate the Website. The responsive design should ensure compatibility across desktops, tablets, and mobile devices, making **FandomVerse** a comprehensive and user-friendly fan content hub.

1.5 Constraints

The Website should not have any facility to store information on a server. Information can be fetched from JSON/TXT files and users can view the same being displayed; however, information cannot be written to the files from within the Website.

Only original, royalty-free, or non-copyrighted content should be used. Copyrighted content should not be used without the necessary permission or license.

The chatbot would not connect to a live external AI service or backend; instead its responses would be generated from a responsive, pre-scripted dataset of frequently asked questions.

© Aptech Limited

1.6 Functional Requirements

The portal would be designed as a responsive Website with a set of pages and menus that represent the choice of activities to be performed.

Pages, menus, and other visual elements must be designed in a visually appealing manner with attractive fonts, colors, and animations suited to a media-rich fandom theme. All of these should also be laid out in a responsive manner.

Note: For several of these options, information would be retrieved from a pre-populated JSON file and displayed. (Hint: Use AngularJS directives, filters, services, controllers OR ReactJS components, modules, and other features to implement this.)

Menu and Web Page Functionality

Home Page

♣ User Interface Elements: Portal logo, animated heading, and introductory text.

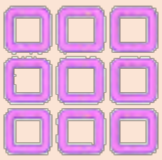

♣ Category Navigation: A responsive navigation bar or grid linking to all seven category hubs: Anime, Gaming, Movies, TV Shows, K-Pop, Comics, and Manga.

- ♣ Featured Content: A rotating or grid-based showcase of featured articles, trailers, and highlighted events across categories.
- ♣ Chatbot Launcher: A floating chatbot icon accessible from the home page and all subsequent pages.

© Aptech Limited

Upon selecting a category, the respective category hub page should be displayed, showing relevant content for that fandom.

Category Hubs (Anime, Gaming, Movies, TV Shows, K-Pop, Comics, and Manga)

- **Functionality:** Displays a catalog of content items loaded from JSON files, specific to the selected category.

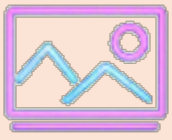

- **Each content card includes:** Title, thumbnail image, short description, content type (article, gallery, video, audio), and tags.
- **Filtering:** Content can be filtered by type (articles, galleries, videos, audio, character profiles, events, merchandise, releases) and by sub-tags relevant to the category.
- **Sorting:** Content can be sorted alphabetically, by newest, or by popularity/featured status.

Search

- **Functionality:** A global search bar accessible from all pages, allowing visitors to search across all categories and content types.
- **Filtering the search results:** Search results can be filtered by category and content type.
- **Data Source:** Search operates over the pre-populated JSON content dataset using client-side JavaScript logic.

Image Galleries (Every category includes Image Galleries)

- **Functionality:** Every category contains its own image gallery.
- **Interaction:** Supports a lightbox or carousel view for browsing images without leaving the page.

© Aptech Limited

🎬 Videos and Audio Clips (Every category includes trailers, interviews, podcasts, and fan videos where applicable.)

- **Functionality:** Embeds trailers, interviews, fan content, and podcast-style audio clips relevant to each category.
- **Data Source:** Video/audio links and descriptions loaded from JSON (for example, embedded YouTube links) or hardcoded data.
- **Filtering:** Filterable by category and content type (trailer, interview, podcast, fan content).

📰 Featured Articles (Anime, Gaming, Movies, TV Shows, K-Pop, Comics, and Manga)

- **Functionality:** Displays long-form articles and news pieces relevant to each fandom, in card and detail-page format.
- **Detail View:** Selecting an article opens a full read view with related content suggestions.

© Aptech Limited

🧒🩹 Character Profiles (Every category should contain at least five character profiles loaded from JSON or hardcoded data.)

- **Functionality:** Each category should contain multiple character profiles loaded from JSON. Each profile includes Name, Image, Series, Biography, and Traits.
- **Filtering:** Filterable by category and franchise.

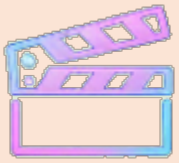

📆 Event Highlights (Each category should contain at least three events.)

- **Functionality:** Displays past and upcoming fandom-related events such as conventions, watch parties, and meetups.
- **Each event entry includes:** Title, date, location, description, and an associated category.

🎟️ Trailers

- **Functionality:** A dedicated section aggregating trailers across all categories, embedded from responsive links in JSON.
- **Filtering:** Filterable by category and release status (upcoming, recently released).

© Aptech Limited

Merchandise showcase and shopping

- **Functionality:** Displays fan merchandise items such as 't-shirt' in a card format — image, name, price range, and short description.

  Users can click to view product information and can add items to a temporary shopping cart, where the total billing amount is calculated and displayed using JavaScript. Checkout and payment features are not included.

Note:- This merchandise showcase includes temporary cart functionality, allowing visitors to add items and view the total. Checkout, payment, and actual purchases are not included.

AI-Powered Chatbot

What is a Chatbot? Chatbot is a built-in virtual assistant within **FandomVerse** that helps visitors find information, navigate the Website, and get answers to frequently asked questions about the different fandom categories and available content.

- **Functionality:** A floating chatbot widget available across the site that answers frequently asked questions, recommends content based on stated interests, and guides users to relevant pages.

© Aptech Limited

- **Data Source:** Chatbot responses are generated from a responsive, pre-scripted dataset of questions, answers, and recommendation rules loaded from JSON or a site-based knowledge base. Tawk.io and Tidio are some of the sites that can be used to create AI chatbots.
- **Interaction:** Visitors can type a question or select from suggested quick reply to prompts; the chatbot responds and, where relevant, links to the appropriate category or content page.

Content Bookmarking System (Bookmarks are stored in browser's local storage. Personal notes remain only for the current browser session using Session Storage.)

For all content types, the following should be available:

- Favorite articles, media, characters, and events.
- Personal notes attached to bookmarked content (session-only)
- Export bookmarks as a formatted list.

Note: You can implement this using a combination of various front-end technologies.)

Contact Us

This page includes responsive team contact information with a Google Map showing location and GPS functionality.

About Us

This page includes responsive information about the team and the Website.

© Aptech Limited

User Interface Features

- **Visitor Counter:** The visitor counter is simulated using JavaScript and Local Storage.
- **Real-Time Clock:** Display the current date and time using JavaScript.
- **Hover Effects:** Hover effects and animated transitions for an interactive feel.
- **Breadcrumb Navigation:** Breadcrumb navigation for better UX across category and detail pages.
- **Dummy Login/Signup:** Login and Signup buttons are UI only and do not authenticate users.

Use Google Lighthouse a free tool to test and validate your Website's performance, accessibility, and SEO.

Important Note Regarding AI Usage:

You are encouraged to use AI-powered tools (such as AI-assisted Website builders, UI/UX design tools, code assistants, and image-generation tools) to enhance productivity and creativity. However, AI should be used as a supporting aid rather than a substitute for your own design, development, and problem-solving skills.

Do NOT rely on full boilerplate or completely ready-made Website templates for your project, as this would adversely affect your evaluation. Your Website's design, structure, and implementation should primarily reflect your own skills and understanding.

Do NOT submit AI-generated code or content without meaningful modification and understanding. AI-generated suggestions may be used for guidance, learning, debugging, or improving productivity, but the final solution should demonstrate your own effort, logic, and implementation.

AI-generated images and graphics are permitted for visual elements of your Website.

Acknowledge the AI tool(s) used (for example, Canva AI, Figma AI, Uizard, or similar) in your project documentation or submission.

During evaluation, judges may ask participants to explain their design decisions, implementation approach, and code. You are therefore expected to understand and be able to justify all aspects of their submitted work.

1.7 Non-Functional Requirements

There are several non-functional requirements that should be fulfilled by the Website. The Website should be:

Non-Functional Requirements	
Safe to use:	The Website should not result in any malicious downloads or unnecessary file downloads.
Accessible:	The Website should be usable by people with visual, hearing, or motor impairments, through sufficient contrast, legible text, and keyboard/screen-reader support.
User-friendly:	The Website should be quick and intuitive to use, with a clear layout and logical navigation.
Operability:	The Website should operate in a reliably efficient manner.
Performance:	The Website should demonstrate a high value of performance through speed and throughput — it should be fast to load, and page redirection should be smooth even with media-rich content. The Website should
Capacity:	The Website should support many users.
Availability:	The Website should be available 24/7 with minimum downtime.
Compatibility:	The Website should be compatible with the latest browsers.

These are the bare minimum expectations from the project. It is a must to implement the functional and non-functional requirements given in this SRS. Once they are complete, you can use your own creativity and imagination to add more features if required.

© Aptech Limited

1.8 Interface Requirements

💻 Technology Stack

Hardware

- Intel Core i5/i7 Processor or higher
- 8 GB RAM or higher
- Color SVGA
- 500 GB Hard Disk space
- Mouse
- Keyboard

Software

IDE: Visual Studio Code, Free Coffee Cup HTML5 Editor, Notepad++, or any other HTML5 editor.

Frontend: HTML5, CSS3, JavaScript, jQuery, Bootstrap, Angular or ReactJS, XML, and the Figma UI Toolkit.

- **AI and Development Tools:** Figma AI, Canva Magic, Framer AI, Uizard, Visily AI, Penpot, GitHub Copilot, Tabnine, Windsurf, and ChatGPT, Claude, or Gemini for UI design, code assistance, image generation, and FAQ/content generation.
- **Chatbot Platforms:** Tawk.to and Tidio for chatbot integration.

Data Store: JSON files or TXT files.

© Aptech Limited

1.9 Project Deliverables

You would design and build the project and submit it along with a complete project report that includes:

- Problem Definition
- Design specifications
- Diagrams such as flowcharts for various activities, Data Flow Diagrams, and so on
- Test Data Used in the Project
- Project Installation Instructions (MANDATORY)

Documentation is considered a very important part of the project. Ensure that documentation is complete and comprehensive. Documentation should not contain any source code.

The consolidated project should be submitted as a Source Code zip file with a ReadMe.doc file listing assumptions (if any) made.

Submit a video (mp4 file) demonstrating the working of the Website including all the functionalities of the project. This is MANDATORY.

Optionally, a live hosted URL can be supplied for the site. Over and above the given specifications, you can apply your creativity and logic to improve the Website.
